

# RESITE RECORDER

## Cut your Project Documentation and Training Time by up to 80%

**RESITE Recorder** provides the answers to the documentation challenges faced by your entire project team by capturing the keystrokes, mouse clicks, and screen shots involved in any process, displaying them in real-time in the *Preview Window*. This content can then simultaneously be outputted to many formats - from a single source, including HTML and interactive simulation.

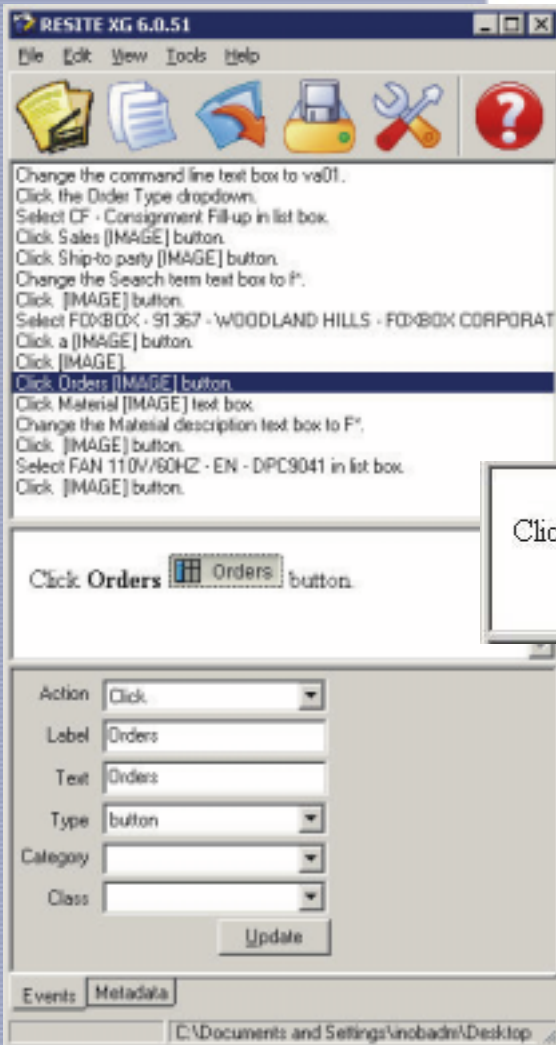

### Is RESITE easy to use?

**RESITE Recorder** requires minimal training to get started. It is that easy. RESITE displays as a simple interface with a 6-button toolbar. One click of the 'Record' button and you're on the way.

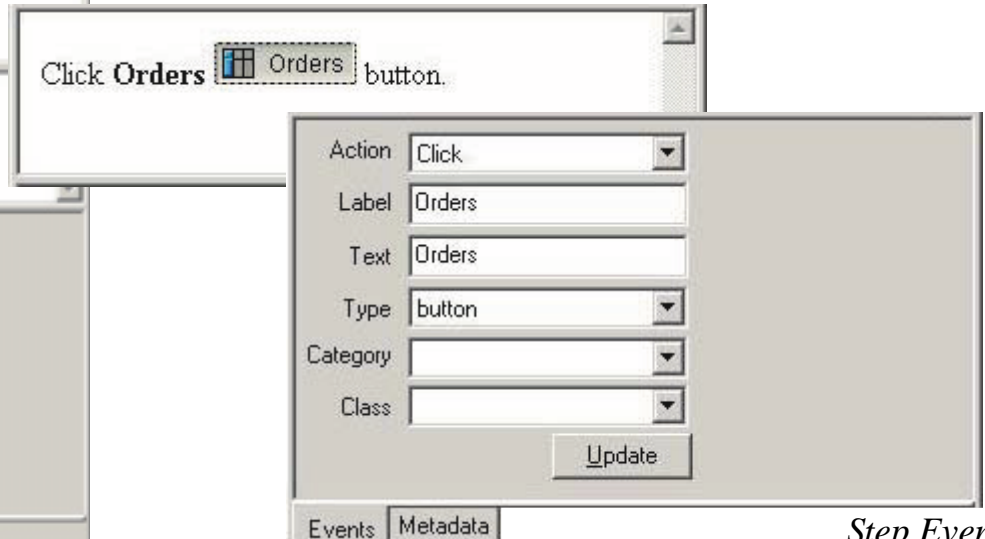

### What does RESITE record?

**RESITE Recorder** captures screen information automatically as you work! While recording, all text input, icons, and screen elements are displayed in the *Preview Window* real-time. All captured information can be edited directly from within the *Preview Window*. The use of the preview window ensures 100% accuracy prior to saving the content, eliminating the need to save or compile to see your work!

## What can I create with RESITE?

When used in conjunction with **RESITE Publisher**, **RESITE Recorder** content can be used to create multiple output documents:

- Transaction documentation created by configurators, developers, or functional experts to provide detailed instructions to the training/documentation team
- Context-sensitive Web Help
- Test documentation (captured with no extra work)
- Business Process Procedures
- End-User training materials
- Updates to existing manuals and materials
- Browser-based simulations

## Experience the power of RESITE

RESITE Recorder is a powerful tool that will help overcome your documentation challenges by quickly, consistently and comprehensively capturing process information with little or no additional time invested.

RESITE supports all versions of SAP and can record all SAP transactions and modules including CRM, BW and APO. RESITE Recorder also records other Windows and Web-based applications. RESITE supports automatic foreign language translations including Dutch, French, German, Italian, Spanish, Polish, and Portuguese.

## *Technical* Requirements
