

RESITE

PUBLISHER

An Automated Approach To Content Publishing!

When choosing a documentation and training solution, your project team must address two questions:

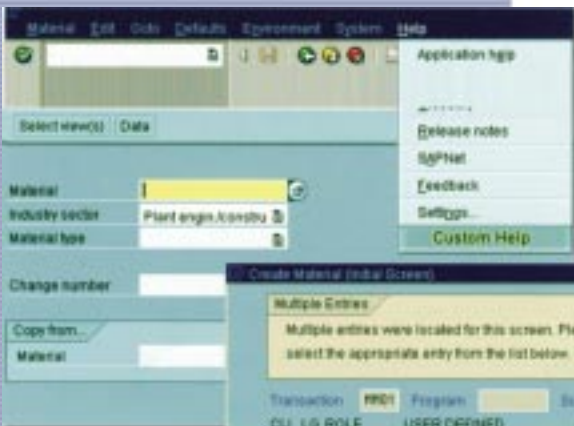

- Will the solution deliver effective, up-to-date, relevant content including simulations, job aids and web help to end users for training purposes during implementation, as well as help and documentation in the post-production environment?
- Is the method chosen cost effective and easy to learn and use, facilitating the timely creation and modification of training materials, online help and process documentation?

RESITE Publisher is the ONLY solution that addresses both of these questions. Users of the RESITE Publisher Solution are reporting up to 80% savings in content creation and delivery costs and significant increases in training effectiveness through the use of integrated simulation-based training modules and context-sensitive help.

Users have quick access to the help they need!

RESITE Publisher automatically creates and publishes multiple learning objects from a single source file:

- Browser-based simulations
- Job Aids
- Context-sensitive Web Help
- End-User training materials
- Business Process Procedures
- Test scripts (captured with no additional work)

Insite Objects, Inc.

No Other Solution Creates and Maintains Your EPSS System Automatically!

With RESITE Publisher, learning objects and the repository they reside in are created and linked to the specific SAP transactions automatically. EPSS system updates are automatic too requiring no additional work to make sure the most up to date learning objects are always available to your end users. Access to these learning objects from within SAP is as simple as using the help menu and selecting the customized help option.

Simulation Modules Automatically Created Too!

From a single source, the RESITE Publisher Solution can also create Interactive Simulation Modules for use in training and for refresher training after Go Live. The Simulation Modules are also stored in the EPSS system and linked to the specific SAP transactions via the help menu . This provides easy access and seamless delivery of Simulation Modules and other learning objects right to your end users when they need it.

RESITE Publisher simplifies your documentation efforts because it:

- Fully automates the creation of learning objects
- Automatically builds your help web site
- Automatically creates simulations and links them to the web help
- Facilitates easy content update by using a single source to create all learning objects

Technical Requirements

RESITE Publisher is a server application installed on Windows 2000, or XP. RESITE Publisher requires a minimum of 256 megabytes of RAM with a minimum of 30 Megabytes of hard disk space and a Microsoft Windows Logo-Certified video card and driver for the target operating system. RESITE Publisher components require access to SAP GUI version 3.1h-6.20 (4.6d-6.20 recommended for SAP installations), Microsoft Word 97, 2000 or XP, a web server and the source documents.
